PROFESSIONAL SUMMARY

Strategic Product Leader with 20 years of experience driving product strategy, P&L turnaround, and platform modernization across Healthcare, Financial Services, and Sustainability. At Oracle, inherited and stabilized a \$125M+ revenue portfolio post-Cerner acquisition — eliminating margin leakage, rationalizing 76 legacy SKUs into 3, and reaccelerating growth across 800+ enterprise customers. At Microsoft, built and scaled Azure AI services from inception to 1,000+ customers and led AI product strategy across three Industry Clouds. Known for turning ambiguous, high-stakes initiatives into structured execution plans, building high-performing PM teams, and translating technical complexity into business outcomes.

CORE COMPETENCIES

Strategic Business Leadership: P&L Turnaround (\$125M+), Product Strategy & Portfolio Management, Go-To-Market & Pricing, SKU Rationalization, M&A Integration

AI & Clinical Intelligence: Generative AI Strategy (OpenAI GPT, Foundation Models, SFT), Tiered LLM Architecture, Clinical NLP (NER, Ontology Linking), John Snow Labs Medical NLP

Platform Modernization: Decentralized API Design, SMART on FHIR, OAuth 2.0, Multi-Cloud Architecture (OCI & Azure), Enterprise-Scale Cloud Migration

People & Team Leadership: PM Team Building, Hiring & Mentorship, Cross-Functional Influence (15+ teams), Post-Acquisition Team Re-energization

EXPERIENCE

Oracle Corporation

Senior Principal Product Manager / Director, Health Data Intelligence (HDI)

June 2023 – Present

Inherited a struggling \$125M HDI Analytics and Health Data Warehouse (HDW) portfolio post-Cerner acquisition — bleeding margin from underpriced contracts, fragmented SKUs, and Epic-driven competitive losses. Led 4–5 PMs serving 800+ healthcare organizations; reset strategy across pricing, AI, and platform.

- **P&L Turnaround & GTM Pricing:** Reversed a margin-leaking portfolio where the top 15% of customers were exploiting fixed-price Snowflake under Enterprise Data Warehouse (EDW)-Advanced. Discontinued Snowflake under EDW-Advanced to align with OCI strategy, added quota guardrails, and authored the unified HDI Pricing & Packaging proposal — collapsing 76 legacy SKUs into 3 and replacing inconsistent meters (NPR, attributed lives, etc.) with a single PMPM/PCPM model. Priced 5x below DIY/hyperscaler alternatives (\$1.05 vs. \$5.10 PMPM) to drive aggressive Oracle Health bundling — first hyperscaler to apply unified PMPM economics to a healthcare data platform.
- **Clinical Data Intelligence (Generative AI):** Defined a tiered “80/20” GenAI architecture to unlock 9B+ unstructured clinical notes for pharma trial recruitment — enabling patient cohort identification in hours instead of months and opening a higher-margin life sciences vertical. Independently benchmarked OpenAI GPT-5 against domain-specific medical NLP and redirected from a \$30M token-based LLM pipeline to a John Snow Labs flat-fee architecture (specialized encoders for 80% of clinical entities, LLMs on-demand for the complex 20%) — achieving 93% OpEx reduction with superior clinical accuracy and the deterministic outputs required for regulatory compliance.
- **Platform Efficiency (Time-to-Value):** Reduced HDI customer onboarding from 6+ months to under 1 month by defining “Standard HDI” deployment defaults, decoupling data ingestion from customization, and orchestrating a cross-functional Gantt across 15+ teams. Cut per-customer onboarding cost from ~\$80K to ~\$5K, unlocking ~\$1.2B in down-market addressable opportunity.
- **Cloud Migration Strategy:** Authored and executed the AWS-to-OCI migration strategy for 800+ customers; delivered the first AWS-to-OCI customer cutover. Restructured the consulting engagement model to reduce Oracle Analytics Cloud (OAC) report conversion costs from \$100M+ to \$12M.
- **API Platform Modernization:** Led the shift from monolithic APIs to a decentralized platform on Oracle Health API Platform (OHAP) Gateway with OAuth 2.0 / SMART on FHIR. Designed developer onboarding and partner enablement for GSIs/ISVs. Discovered and escalated a critical security gap in system account management, driving prioritized remediation with Cloud IAM.
- **Team Leadership:** Re-energized a post-acquisition PM team facing low morale by raising the bar on PRD quality, product thinking, and operating cadence. Hired senior external PM talent, mentored ICs across experience levels, and instituted the first Weekly Business Review and PR-FAQ for HDW.

- **Customer Advocacy:** Resolved high-severity escalations across enterprise accounts, including protecting an \$8M contract by personally diagnosing AWS/Snowflake region semantics for a state health agency. Established best-practice escalation guidelines spanning product, engineering, field, and consulting.

Microsoft Corporation

Redmond, WA

Principal PM Manager, Azure AI & Industry Clouds (Finance, Sustainability, Energy)

Mar 2020 – Apr 2023

- Directed end-to-end AI product strategy across three Azure Industry Clouds, leading cross-functional teams of PMs and Data Scientists. Developed LLM-driven solutions (T5, GPT-3) for SEC filing summarization, ESG entity extraction, methane leak detection, and automated invoice processing. Drove 20% increase in enterprise customer adoption within 6 months and \$200M+ TCV in Azure contract renewals with multinational banks.
- Built customer onboarding strategy adopted by 30+ enterprise customers including 2 global banks; established partnership agreements with 3 key ISVs. Hired domain experts in quant finance and energy to build deep learning proxy models for capital markets risk and options pricing.

Senior PM Manager, Azure AI Ecosystem

Jan 2016 – Mar 2020

- Hired and built a high-performing PM team that shipped flagship open-source AI repositories ([NLP](#) 6K+ stars, [Computer Vision](#) 9K+ stars, [Recommenders](#) 21K+ stars) — reference implementations that became drivers of Azure AI platform adoption across the developer community.
- Led critical AI workload migrations for enterprise customers, generating \$100M+ in incremental Azure TCV across Fortune 500 companies.

Product Manager, Azure Stream Analytics & StreamInsight

Jan 2012 – Jan 2016

- Launched Azure Stream Analytics V1 from inception to GA in 12 months with a TechEd Europe GTM and a partner event with 60+ partners. Grew to 1,000+ customers in the first year (12% MoM growth) while maintaining 99.9% uptime for production workloads including Xbox Halo. Owned query language, IoT ingestion, ML integration, and geo-spatial features.

Senior Engineer, SQL Server & Business Intelligence

Aug 2005 – Jan 2012

- Senior escalation point for premium Microsoft customers across SQL Server and BI. Owned product pipeline for SQL Integration Services and Reporting Services. Built deep technical and customer expertise across SQL Server, StreamInsight CEP engine, and BI platforms — foundational to the transition to product management.

EARLIER CAREER

Micro Architect | Co-Founder — Bangalore, India. Co-founded a B2B SaaS startup for the tours and transport industry. Managed end-to-end product lifecycle from capital allocation to market launch of “Smart Traveler,” a real-time logistics platform.

EDUCATION & CERTIFICATIONS

Master of Computer Applications (MCA) — Bangalore University, India

Bachelor of Computer Science (BS) — Bangalore University, India

Advanced AI Projects Portfolio — Microsoft AI School

PATENT, AWARDS & SPEAKING

Patent: Constructed Data Stream for Enhanced Data Processing (US Patent No. 9870410, Jan 2018)

Speaking: Microsoft Build, Strata, Hannover Messe, Oracle Cloud World, PASS Summit

Awards: Golden Volcano (The Garage), ACE Star Performer

Selected Writing: [“The Most Expensive AI Decision Your Team Will Make This Year”](#) — LinkedIn (2026)

Work Authorization: US Lawful Permanent Resident
